# Beats studio 2 wired not charging

If you would prefer to read a written repair guide, check that out below. Or if the tool cost seems prohibitive for a one time repair and you would prefer that we complete this repair for you, check out our Repair Catalog to see if we offer repair services for this device. Are you a business? We offer wholesale discounts on our repair services if you are sending numerous units in for repair or want to send us continuing batches of devices for repair on a regular basis. Contact our support team for more info [Info@JoesGE.com](mailto:Info@JoesGE.com) (This email is only for wholesale inquiries, please contact [Support@JoesGE.com](mailto:Support@JoesGE.com) for other inquiries). Repair Difficulty: Moderate  
Time to complete: 1 hour. The tools and parts that you will need for this repair: A new charge port. This One if your headphones have wireless Bluetooth connection and This One if they do not have wireless capabilities. One piece of Earpad Tape. (The Wireless charge port can be bundled with the tape at a discount if you use the link above) Strong Fry Tool (your fingernail, a guitar pick, or the dull side of a butter knife will also do the trick) A soldering iron (around 15 watts is good for small electronics and would be cheaper than purchasing a temperature variable unit). Solder Flux (To ensure clean solder joints) Small Phillips Screwdriver T9000 Clue

1. Make sure that you have the correct charge port We just want to reiterate this to make sure that you have the correct part to repair your headphones. If your headphones say "Wireless" on one side of them and have Bluetooth capabilities, you will need a blue charge port. If your headphones say "Studio" on both sides and are not wireless, you will need the green charge port.
2. Remove the earpad Using your pry tool, gently pry the charge port side earpad away from the speaker housing of the headphones. Make sure that you insert the pry tool between the leather of the earpad and the plastic of the housing. Start at the bottom near the charge port, and work your way around the entirety of the earpad until it comes off. The earpad is only secured with double-sided tape.
3. Remove the speaker There are five screws holding the speaker housing in place and two screws holding the charge port in place. Using your Small Phillips Screwdriver remove the five screws that hold the speaker in place first and do not remove the charge port screws quite yet. When you finish removing the screws, lift the speaker housing up and you will reveal a few wires that are taped to the speaker housing. Gently remove the wires from the speaker housing so that it can be flipped over to reveal the charge port.
4. Removing the charge port Now you can remove the two screws that hold the charge port in place. Next, grab your soldering iron and remove the five wires that are soldered onto your charge port (Should be only 2 wires for the wired-only version of the headphones). Make sure that your soldering iron is clean and use a small amount of solder flux to ensure that you do not have to hold your soldering iron on the contacts for more than a couple of seconds. You can also pull this small microphone out of its spot in the speaker housing to make the process of installing the new charge port less difficult. Just don't pull on it too hard, a nice easy amount of pressure is all it takes.
5. Installing the new charger port When installing the new charge port, it is important to ensure that the wires are soldered to their correct points on the new PCB. Below are two images of charger port wiring, the first one is for the wireless version of the Studio 2 and the second is for the wired-only version. Make sure to clean your soldering iron tip and use a small amount of solder flux on each contact to ensure a good connection. Once the new charge port is soldered on, push the small microphone and its rubber housing back into the socket in the speaker housing and resecure the wires to the housing with the tape. Then put the charger port in its place. Make sure to also put the black rubber piece back on the charge port. Now you can screw in the two screws for the charger port so that it is secured to the speaker housing.
6. Reassembly Reinsert the 5 speaker housing screws and tighten them until there is solid resistance. With the speaker housing screwed into place, you want to first test the headphones to ensure that they are working properly, before re-adhering the earpad. Plug them in to charge and make sure that you see the fuel gauge lights turn on indicating that the headphones are charging. Once you have determined that they are working, you can apply the new Earpad Tape to the earpad. Make sure that the holes in the tape are lined up properly with the holes in the earpad's plastic frame so that the small pegs on the speaker housing can fit into them. Press and hold the earpad for 30 seconds on a flat surface to ensure that it has properly adhered.
8. Get back to jamming out If you have any questions in regards to this repair, feel free to shoot us an email or text and we will do our best to reply to you as quickly as possible. Please inquire using our Repair Catalog if you are wondering how much a certain repair will cost. If you do not see your item in our repair catalog, it means that we do not offer repair services for it. [Support@JoesGE.com](mailto:Support@JoesGE.com) 360.362.1722 If your Studio or Studio Wireless headphones aren't charging properly or you're having difficulties with sound, try resetting your headphones. Press and hold the power button for 10 seconds. Release the button. The Fuel Gauge LEDs will all blink white, followed by one blinking red.

- To charge. Connect charging cable to micro USB port on right earcup. Connect the USB-end of cable to a power source. It takes about 2 hours to fully charge a dead battery using the AC adapter. ... - Battery status. Here's what the blinking LEDs on the Fuel Gauge mean: When unplugged from power source: Do Beats Studio 3 come charged? 2 Answers from the Community My Beats Solo3 headphones came 100% charged out of the box, so i would assume this is the same. What do I do if my beats wont charge? - Press and hold the power button for 10 seconds. - Release the button. - The battery Fuel Gauge LEDs will all blink white, then the first will blink red—this sequence will happen three times. - When the lights stop flashing, the reset is complete. Can you use beats studio without charging? Yes they will need to be charged for the headphones to go loud, but they will be very faint If there is no battery as the circuit board inside them uses power to act as an amplifier for the speakers. How do you charge Studio 3 beats? - To charge. Connect charging cable to micro USB port on right earcup. Connect the USB-end of cable to a power source. It takes about 2 hours to fully charge a dead battery using the AC adapter. - Battery status. Here's what the blinking LEDs on the Fuel Gauge mean: When unplugged from power source: Are Beats Studio wired? Dre Studio Wired Over-Ear Headphones, Blue: Adaptive noise canceling. How do you charge the batteries in Beats Studio wired? Watch the video Can I charge my beats with any charger? You can use any adapter that has a USB female connector, just as long as the other end of the cable is a male android connector. Yes any simple usb plug in can charge the headphones. How do I fix my Powerbeats 3 not charging? - Force Restart or Reset your Powerbeats 3. - Use the Remote Button to Restart your Powerbeats. - Get another charger. - Check for sweat and water damages. - Try to Remove your device's battery. - Fix the Loose Wire. - Leave the Device Alone For several Days. - Forget the Device on Your iPhone. How do you fix wireless headphones when not charging? The battery/cable/charger or charge port may be faulty damaged. Look in the charge port and blow/pick out (carefully) any dust/debri that may be causing an issue also look in the port for any damage or if it is loose. Try a different compatible charger/cord to see if that is the issue. How much does it cost to replace batteries in Beats? Product Fee ——— — Beatsx \$ 59 Beats Pill \$ 79 Beats Pill 2 \$ 79 Beats Pill+ \$ 79 How do you know when your beats are charged? The red LED that turns on when charging changes to white when fully charged. The light turn from red to blue. The charging light of red changes or disappears. Unfortunately, there is no light that will tell you when the Beats X have fully charged. Last Updated: 5 days ago - Co-authors : 12 - Users : 6
